

Glacier Mass-Balance Field Notes (Sample)

Glacier Mass-Balance Field Notes. This fictional note describes a glacier field season near Himansh from 1 September 2025 to 5 October 2025. The team re-measured a network of 34 ablation stakes on the glacier tongue.

Snow density was measured at 3 accumulation-zone pits above 4,850 m. Debris cover on the lower tongue made several stakes hard to reach. The field team recommends replacing 5 stakes next season.
